

Red Epic Dragon 6K (DSMC) Core Package

With the 6K RED DRAGON® sensor, you can capture over 9x more pixels than HD. Unrivaled detail and impressive native exposure eclipse 35mm film in both latitude and image density. Industry leading specs distinguish the EPIC DRAGON as a model for image innovation, helping the evolution of digital cinema technology.

6K resolution translates to over 19 MP, packing the same detail you expect from your DSLR into a cinema camera. When you can capture motion and stills in 6K 2.4:1 at up to 100 frames per second (fps), or 6K Full Format at 75 fps, you get up to 100 chances per second to capture the perfect picture. Every still is raw and Adobe Photoshop compatible, which means your workflow doesn't need to change—even if technology does. The RED DRAGON sensor blurs the line between motion and still cameras, giving you the best of both worlds.

Includes

Qty	Description	Qty	Description
